The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1)⊠ Responsive to communication(s) filed on <u>01 S</u>	eptember 2006.						
3) Since this application is in condition for allowa	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is

2nd Non-Final Rejection

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Copinathan et al (US 6,433,965)

Claim 1, Copinathan et al shows a thin-film magnetic head having an magnetoresistive (MR) head portion containing magnetoresistive elements (Column 6, lines 41-43), wherein a diamond-like carbon (DLC) protective film 220 (Fig. 8A, column 6, lines 43-46 and column 7, lines 9-13) having a composition represented by the following formula: $CH_a O_b N_c F_d B_e P_f$ (where a=0, b=0, c=0, d=0, e=0, a and f=0, in terms of atomic ratio), and having a thickness of 10-30 Å (Column 6, lines 43-46), is formed directly at least the surface of the MR head portion facing a recording medium.

Claim 9, Copinathan et al further shows in Fig. 6 that a slider is equipped with the thin-film magnetic head as described above.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Copinathan et al in view of Nepela et al (US 6,330,131).

Claim 3, Copinathan et al does not show a = 0.05 - 0.7.

Nepela et al shows a protective layer wherein a =0.03-0.4 (Column 2, lines 49-54).

It would have been obvious at the time the invention was made to one of ordinary skill in the art to set a=0.03-0.4 as taught by Nepela et al. The rationale is as follows: et al teaches a protective layer, which is deposited in a hydrogen environment (Column 6, lines 9-17) but does not teach the amount of hydrogen. Nepela et al teaches a method of making the protective layer and teaches that if keep a=0.03-0.4, the layer would have high hardness (Column 2, lines 49-54). One of ordinary skill in the art would have been motivated to set a=0.03-0.4 to obtain high hardness.

Response to Arguments

3. Applicant's arguments with respect to claim 1 have been considered but are most in view of the new ground(s) of rejection.
